

Employee Attrition Analysis

Data Cleaning Report:

1. Introduction

The objective of this report is to document the data cleaning and preprocessing activities performed on the Employee Attrition dataset before conducting exploratory data analysis.

2. Dataset Overview

- Number of Rows: 1470
- Number of Columns: 31
- Dataset Type: Employee Attrition Dataset

3. Missing Value Analysis

The dataset was examined for missing values using the `isnull().sum()` function. No missing values were found in any of the columns. Therefore, no imputation techniques were required.

4. Duplicate Record Analysis

Duplicate records were checked using the `duplicated()` function. No duplicate records were identified in the dataset.

5. Data Type Verification

The data types of all columns were verified using the `info()` function. The dataset contained both numerical and categorical variables.

6. Feature Categorization

The columns were categorized into numerical and categorical variables to facilitate exploratory data analysis.

7. Data Quality Summary

The dataset was found to be clean, consistent, and ready for exploratory data analysis without requiring major preprocessing steps.

8. Conclusion

The Employee Attrition dataset did not contain any significant data quality issues. Therefore, the dataset was considered suitable for further analysis and visualization.
